Step 5 definition of btc mining

Bitcoin mining is the basic way you can grow your bitcoin .The primary purpose of mining is to

allow Bitcoin nodes to reach a secure, tamper-resistant consensus. Mining is also the mechanism used to introduce bitcoins into the system. Miners are paid transaction fees as well as a subsidy of newly created coins, called block rewards. This both serves the purpose of disseminating new coins in a decentralized manner as well as motivating people to provide security for the system through mining.

Step 6

Firstly, I have to educate you about bitcoin, it's the most popular digital currency although it has no central authority controlling it but it has risen to prominence due to its daily increasing value in the world stock market.

Step 7

I mine via the aid of Antminer S9 and I have a large founder pool, everyday I add new investors to mine with me because the more the investors the more the nodes and the more the nodes the more the earnings, nodes are where mined or deposited bitcoins are stored,
